

TRAILER LIGHTING INTERFACE

Part No: **VTI-S2**

ORANGE = +12 Volt (From Boot light, Accessory or Ignition feed)

The VTI powers the trailer lighting circuits without loading the vehicle lighting circuits. It requires a separate power feed from the boot light feed or an ignition / auxiliary feed.

VTI-S2 Features

Protection:

- Prevents blown vehicle fuses and damage to the Vehicle Body Control Module from a short circuit in the trailer wiring.
- Enables the vehicle lighting to continue operating if there is a short or open circuit in the trailer wiring.
- Automatically recovers from a short circuit in the trailer wiring.
- Will carry a maximum load per circuit of 42 Watts.

Intelligent Monitoring:

- The VTI is compatible with trailers fitted with bulbs or LED lamps.
- The VTI will eliminate fault codes by prohibiting the trailer lamps from being detected by the vehicle electronics.

Warranty on Reverse
