## AIR DOOR CONTROL UNIT (single valve)

Part No: ADC-24

### **INSTRUCTIONS**

The ADC-24 controller interfaces between the driver's door control switch and the air door solenoid. A microswitch (not supplied) is fitted to the door mechanism for the door close sensor switch. This switch is N.O. (normally open) when the door is in the fully closed position.

From the closed position; when the door control switch is moved to the open position, The solenoid will be activated, opening the door. Once the door has moved off the door close sensor switch, the door control switch can be released and the door will continue to open.

When the door control switch is moved to the closed position, the door will close while the switch is being held on. If the switch is released before the door closes, the door will automatically re-open. Once the door has closed fully, the door control switch can be released.

Warranty statement on reverse.
