## REV-RITE LIMITER

Part No: SD303

### **INSTRUCTIONS**

Wire the SD303 to the coil and 12V ignition as shown above. Set the RPM dial to minimum and rev the engine to check for correct operation. The limiter should activate a little under 5000 RPM. Now dial in the desired setting.

**NOTE:** The 12V supply to the limiter must be present during cranking.

The limiter disables firing of one or more cylinders to maintain engine revs at the pre-set limit. The limiter reduces the firing randomly over the cylinders and does not shut the ignition down completely. This enables quick recovery and reduces backfiring.

Warranty statement on reverse
